

# TEJAS R.NIGHOJKAR

Data Analyst and Data Engineer

[nighojkartej@gmail.com](mailto:nighojkartej@gmail.com) | +91 7517512856 | [in Tejas Nighojkar](https://www.linkedin.com/in/TejasNighojkar) | [Github](https://github.com) | Pune, India.

## Professional Summary

Results-oriented Data Analyst & Power BI Developer with 5.6+ years of experience building scalable BI solutions, optimizing ETL pipelines, and developing Azure-based data systems. Strong background in query optimization, performance tuning, and delivering high-impact analytics. Skilled in Power BI, Tableau, Looker, SQL, Python, data modeling, and implementing RLS/OLS. Proven ability to collaborate with stakeholders, lead UAT and A/B Testing, and drive end-to-end BI delivery in Agile environments.

## Key Skills

- **Data Engineering & Analytics:** ETL (Extract, Transform, Load) | Power Query | SQL | Python | Data Modelling | Data | PySpark | Transformation | Power BI and Fabric | DAX | M Query | Advanced Data Visualization | Dashboards | Reports | Tableau | Excel | SQL Data Retrieval | Data Cleansing | Query Optimization | Data Governance | Data Security (Row-Level & Object-Level) | BI Tools (Tableau, QlikView, Looker Studio) | Power Apps | Power automate | Data Flows | Excel Pivots | VBS and Macros | Statistics.
- **Cloud & Database Technologies:** Microsoft Azure (Azure SQL Database, Azure Data Factory – ADF, Synapse) | SSMS | MySQL | Oracle | Cloud & On-Prem Data Gateway configuration and Data Integration | Databricks
- **Programming & Automation:** Python (Pandas, NumPy, Matplotlib) | Git and GitHub Version Control | Power Automate | DAX | M Query | Workflow Automation | Jupiter notebook, Scheduled refresh using Power automate and Power-Bi – inbuilt.
- **Project Management & Collaboration:** Agile Methodology | Jira | Business Requirements Gathering | Stakeholder Communication | Documentation (HLD, LLD, BRS) | Process Flow Diagrams (MS Visio)

## Work Experience

**Bugendaitech Pvt Ltd (Feb 2021 – Present), Role: Data Analyst**

### Role Description & Projects:

#### 1. Proactive Obsolescence Management Supply Chain Analysis

- Curated and maintained Power BI dashboards and automated workflows for the Embedded COE electronic obsolescence governance program, enabling week-over-week visibility into risk mitigation, project execution, and sourcing progress across 10 divisions and 128 product families. Improved leadership decision-making and cross-functional accountability, accelerating project completions, reducing sourcing lead-time risk, and helping prevent line-down situations while protecting multi-billion-dollar product portfolios.
- Developed a Product Health Score Dashboard that consolidated key performance, quality, service, and downtime indicators for critical products, giving leadership early visibility into underperforming areas. Enabled data-backed prioritization of high-risk products and corrective actions, contributing to a 10% improvement in operational efficiency by reducing downtime, improving issue-resolution speed, and strengthening focus on products with the highest business and customer impact.
- Optimized Power BI data models and refresh workflows, reducing data refresh time by 40% and improving dashboard load performance for end-users. Enabled faster access to business-critical insights, improved reporting reliability, and reduced decision-making delays for stakeholders.

#### 2. SPCI Strategic Product Cost Innovation Program

- Built interactive reports for tracking of Cost Innovation projects to monitor Savings and Targets and performance tracking.
- Automated data consolidation from Excel, SQL, and SharePoint reporting.
- Provided trend analysis and predictive insights using Power BI and Python.

#### 3. CBOM Should-Cost Web Application Project

- Designed and implemented an end-to-end ETL pipeline & web application (Flask + SQL Alchemy + MySQL + Pandas) that automates ingestion, normalization, and deduplication of BOM data, integrates with Nexar-GraphQL for live distributor quotes, and exports consolidated Excel reports.
- Achieved 90% reduction in processing time (from 600 mins to 15 mins per BOM), improved data accuracy, and delivered a scalable system capable of handling 10,000 plus components efficiently.

#### 4. Insurance Claims Analytics Pipeline using Azure Databricks

- Built a scalable insurance claims analytics pipeline in Azure Databricks using PySpark, Delta Lake, and Spark SQL to clean raw data, create Silver and Gold Delta tables, and generate claim-based business KPIs.

## EDUCATION & Certifications

- Microsoft Certified: Power BI Data Analyst PL-300
- Bachelor's degree in, Mechanical Engineering – Alard College of Engineering and Management, **Savitribai Phule Pune University**, Percentage: (72.27%) CGPA: 7.67
